PROFESSIONAL SUMMARY

B.Tech Computer Science & Engineering graduate with 6+ Month hands-on experience developing **RESTful APIs, backend services, database-driven applications, automated testing workflows, and CI/CD pipelines** in agile sprint environments. Skilled in **Python, Java, JavaScript, FastAPI, Flask, SQL/NoSQL databases, API specifications, API testing, code review, automation, and Git**. Experienced in developing customer-facing web applications, integrating backend services, validating data, and delivering software through iterative development and testing.

TECHNICAL SKILLS

Languages	: Python, Java, JavaScript, C++, SQL, HTML5
DSA	: Data Structures Algorithms, Problem Solving, Algorithm Design
Backend	: FastAPI, Flask, Django, RESTful APIs, Web Services
API & Integration	: REST API Design, API Specifications, OpenAPI, API Integration, OAuth 2.0, JWT, HTTP
Databases	: MySQL, MongoDB, SQLite, SQLAlchemy, CRUD Operations
Testing & DevOps	: Manual Testing, Automated Testing, Data Validation, Debugging, Git, GitHub, Docker, CI/CD

EDUCATION

NITRA Technical Campus, AKTU
B.Tech, Computer Science & Engineering **CGPA: 7.12/10**

Ghaziabad UP, India
May 2022 – June 2026

EXPERIENCE

Python Developer Intern Druidot Consulting (OPC) Pvt. Ltd.	Feb 2026 – Present Remote
- Developed and maintained RESTful APIs using Python, Flask, and FastAPI across agile sprint cycles, working with API specifications, backend services, testing, debugging, and iterative feature development. - Built Python-based automated tests and validation checks for database-driven workflows, reducing manual verification effort and improving data quality before production processing. - Performed SQL/NoSQL data validation and pipeline debugging across MySQL and MongoDB, supported database schema integrity, and improved query performance for customer-facing data workflows.	

PROJECTS

NLPCRM – AI-Powered CRM Platform	Python, FastAPI, Flask, MySQL, SQLite, REST APIs	GitHub
- Designed and developed 25+ RESTful API endpoints across contacts, NLP, email, and webhook modules, implementing API specifications, CRUD operations, input validation, and modular backend workflows. - Integrated MySQL and SQLite using SQLAlchemy for structured data persistence and database-driven workflows, supporting reliable customer and application data management. - Implemented OAuth 2.0 authentication, JWT-based access control, rate limiting, and input validation.		
ContentDesk – AI Content & Data Processing Platform	Python, Flask, SQLite, REST APIs, GitHub Actions	GitHub
- Engineered a shared Python/Flask backend serving web and desktop application channels, centralizing business logic and database-access workflows for consistent application behavior. - Developed an SEO-scoring crawler and TF-IDF near-duplicate detection workflow to automate content analysis and generate data-driven recommendations. - Implemented 26 automated unit tests in GitHub Actions CI, enabling automated testing on pull requests and improving software reliability across iterative development cycles.		

CERTIFICATIONS & ACTIVITIES

- Python Programming Certification** – Infosys Springboard **Quantitative Research Job Simulation** – JPMorgan
- Presented “Adaptive Residual-Energy Threshold LEACH for Performance & Energy Efficiency” at NGAISL-2026, HRIT University (Apr 2026).
